I didn’t know insulin was such a vital part of your overall well-being. My muscles have gotten better, my vision has gotten better...my migraines (too). If you can see a picture of me even a year ago. I would come in (to the CCMC infusion clinic) the first month or two and I would be so sore and so swelled up that I would come and sit in a recliner. They would put pillows under my arms and a warm blanket over me and I would just sit there. I was in so much pain. Dr. Miller, my doctor, told me he said you’ve got so much going on and had so much happen to you all your life, it’ll take a little bit longer for you to recognize how this treatment is addressing your malfunctions. Slowly, day by day, I started feeling better, and now I’ve joined the living. I got color back in my face. I could taste food better; I could see better.

I’ve sat in the Infusion Clinic for a year and a half and watched lots of people. The stories that I’ve heard from them and the miracles that I’ve seen!

If you have a chance and you’re offered the opportunity to participate in this program, go as quick as you can. I tell people just stick with it, it’s not an overnight deal. Your body’s got a lot of cleaning up to do. Give it a full portion of your life.”

“June 22, 2021, marked an historic day in the history of Comanche County Medical Center. That was the day we began the Physiologic Insulin Resensitization (PIR) treatments for our first eight patients. What an exciting and life-changing day for us all!

Patients who entered with neuropathy so severe they could not wear their boots nor feel the cold tile floor, soon were telling us that had changed! The boots that had been in the closet were now able to be worn.

More patients began to enter the program. More amazing results continued to be reported to us. We have patients who were about to start dialysis and now, for two years, they have avoided that. Not only did they not have to be dialyzed, but they have improved! That is groundbreaking!

The program has given hope to patients with chronic conditions that thought they would have to go home and live with it. As a healthcare provider for over 30 years, I am thrilled to have the opportunity to help improve chronic conditions, and not just "put a band-aid on it."

Please do not sit at home thinking you just have to cope with your symptoms. Come see us and see if there is any way we can help you.”

For more information on the Physiologic Insulin Resensitization (PIR) treatment, plan to attend an informative session on the 4th Monday of the month at 5:30 p.m. in the CCMC Cafeteria. Virtual participation is available.
